Snow Leopard

Panthera uncia

Well adapted to life in high, cold mountains.

More info

Range

RANGE AND HABITAT

It lives in the mountains of **Central and South Asia.** Its habitat includes rocky slopes, ravines and stony terrain.

SIZE AND WEIGHT

Body length: approximately **100–130 cm**
Tail length: approximately **80–105 cm**
Weight: approximately **22–55 kg**

MASTER JUMPER

It can jump up to about **15 metres**.

DIET

It is a **carnivore.** It mainly hunts mountain sheep and ibex. Its prey can also include marmots, hares and other small animals.

SOLITARY LIFE

Adult snow leopards mostly live **alone.** They meet mainly during the mating season. The female then raises her cubs on her own.

CUBS

Females usually have **2 to 3 cubs.** Pregnancy lasts about **3 to 3.5 months.** Cubs stay with their mother until they are about **18 to 22 months old.**

MATURITY AND LIFESPAN

Females can have cubs from about **3 years old,** while males mature at around **4 years old.** In the wild, snow leopards usually live for about **10 to 12 years.**

A TAIL LIKE A SCARF

Its long, fluffy tail helps it **balance** when jumping and climbing. In the cold, it can **wrap its tail around its body.**

PAWS LIKE SNOWSHOES

Its wide, furry paws help it **walk on snow** and protect it from the cold.

CONSERVATION The snow leopard is listed as **Vulnerable** on the IUCN Red List.
